Subj: NPRM, CC Docket No. 92-297, Jan. 8, 1993

Dear Sir,

We are one of the Experimenters of NASA's ACTS Project in the NASA-EOA program.

The proposed rulemaking will affect the satellite based communication in the Ka band since sharing cannot be done between the satellite and terrestrial services. We kindly request you not to allocate the 27.5 to 29.5 GHz Ka band for the local multipoint distribution services. This proposed allocation will affect ACTS experimenters and other commercail satellite based operations in the Ka band.

Since considerable effort has already been spent in the satellite and electronic technology for the Ka band it will cause significant financial and other hardship to concerned parties.
Thank you for your consideration.

Sincerely,

Vason P. Srin

Director of R&D
